Stainless Steel Construction for Palm Sap Filtration Using the Buchner Method <i>Nancy Jeane Tuturoong, Jimmy Reagen Robot, Jenny Rondonuwu, Edmond C. Mononutu</i>	105-114
Design and Development of a Stainless-Steel Fermentation Tank for Palm Wine with Gravity Purification Construction <i>Jimmy Reagen Robot, Nancy Jeane Tuturoong, Michael Edward Rembet, Edmond C. Mononutu</i>	115-126

We are pleased to present this volume of the International Journal of Contemporary Sciences (IJCS), dedicated to exploring interdisciplinary approaches to modern scientific challenges. This issue reflects the journal's commitment to fostering impactful research in fields such as healthcare, engineering, environmental sciences, information technology, and social sciences.

The studies featured in this volume highlight innovations and analytical perspectives that address both global and regional concerns. One study investigates advancements in healthcare diagnostics, with a focus on early disease detection techniques that could transform preventive medicine. Similarly, our engineering section explores sustainable methods aimed at enhancing industrial efficiency while reducing environmental footprints, a critical objective in today's climate-conscious world.

In environmental science, this issue includes research that examines biodiversity conservation as a response to climate change, presenting strategies that prioritize ecological balance. The information technology section delves into pressing topics like data privacy and cybersecurity, issues that are increasingly relevant as digital adoption accelerates across the globe.

Social sciences are represented with articles exploring the effects of digital psychology, consumer behavior, and market dynamics. For example, one study examines the Fear of Missing Out (FOMO) and its implications for marketing, providing insight into modern consumer behavior influenced by social media. Another research piece delves into cryptocurrency adoption in Indonesia, addressing the balance between innovation and user confidence in financial technology.

Finally, the issue includes studies on human resource management and organizational behavior. One article addresses the factors influencing employee turnover, highlighting organizational reputation and work-life balance as key considerations. Another piece analyzes leadership's role in supporting employees, especially in cases of overqualification, which is particularly relevant to the hospitality industry.

We extend our deepest gratitude to the authors, reviewers, and the editorial team for their hard work and dedication. Through this volume, we hope to inspire readers and encourage interdisciplinary collaboration, fostering progress that resonates beyond academia.

Happy reading
