ABSTRACT

Administration Malpractice for Delusive program making is essential to discuss about enhancing funds and events at school with risky report as it is valuable for fabrication indication by administrator at school. The School Administration is actually referred in this case indicated to include for maintaining practice with digital filter for inner corruption towards event and finance report at school environment with development design via digital or computerized attachment for minimizing corruption at school. It is therefore applied in to equalize standard outcome for finance report referred for the events. In the matter of fact, the audit with digital appliance is not mere to manual implementation but adherent to automatic check installed to view and filter inequality report of current standard system.

INTRODUCTION

Administration as the previous procedure to create adequate result of working management system could proceed the role of Public Administration in this case providing an essential indication resulting a significant contribution about returning the school image to its original state, namely as an institution for public trusts.

Because in the case of distrust, the function of public administration is to handle matters related to the needs of the Malpractice for Student Parent Complaints as responded optimally, but in reality, many of the videos on social media include public orations in front of the School officials regarding about malpractice of program implementation, these parents state orations related to Complaints about malpractices of new book purchases, additional programs as not recorded transparency for the parents as invited for the school officials.

Administrative activities are needed as standard administrative work standards for the National Police as state administrative efforts to do things effectively and easily, according to William H Newman in his book *Administrative Action* states that Administration has been defined as the guidance, and leadership and control of the effort of a group of individuals towards some common goals.

Therefore, good health starts from the lowest bureaucracy of the Indonesian School Institution by providing counseling or symposiums to subordinate members or officials with this theory so that the image of the Institution can change to what it was before as healthy school without report manipulation for any programs.

It is interpreted that administratively, the common school officials, the Security and Order Section, is tasked with being an administrative liaison between the parents and school administration towards health administration ahead during practical reason as finance outcome should be more relevant as the programs audited digitally is more comprehensive and believed than therefore recorded manually.

From the reference above, this research uses an analysis of how the School Administration organizes the digital audit so that it can restore the image of the School Official in terms of people complaints against malpractice of deviance finance and program report. Benefits from the digital system in raising the image of the School administration official In addition to saving time and public reports, it can also encourage the public to participate in providing security synergy in the legal area of the School administration using the system of digital audit.

This system is also implemented and planned by the School Administration in carrying out Malpractice responses regarding handling Administrative Malpractice Complaints or Other Complaints regarding the high Manipulation rate in the jurisdiction of the Greater School Administration as a duty and function in the School Administration.

The role function of Public Administration in this case is within the scope of the correct service pattern regarding handling Malpractice complaints, which then becomes the trigger for the existence of the Police Malpractice Complaints

Malpractice or Malpractice Complaints Activities can be organized well, because Malpractice complaints or Malpractice Complaints about Malpractice Complaints become benchmark for how the School collaborates with the Malpractice Eraser.

As Referred, the following suggestions can be put forward for the Grand Strategy that has been designed by the Greater School Administration and its region, the Digital Audit Section, to pay attention to several important aspects, so that the strategy service can run in accordance with what is expected by the School Administration and its region for general public.

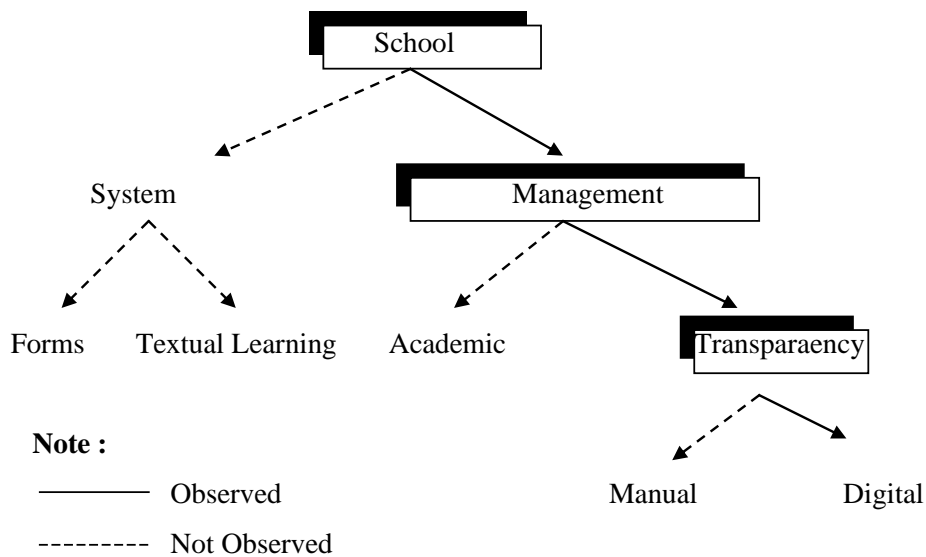

This strategy must be able to stimulate and develop a spirit of trust in the Removal of Administration Malpractice so that trust in the School Administration can be maximized, in this case the synergy between the Malpractice and the Administration in relation to creating security and order.

This synergy is actually driven directly by the Malpractice, supported by the Greater School Administration and the region in this effort to create a secured climate of security and order so that the Malpractice can experience optimal security and order. As if the service climate is conducive, the public will feel the stability of security and good order in the jurisdiction of the Greater School Administration Design.

Efforts to create a healthy climate of synergy between the Malpractice Administrative Removal and the Digital Audit at School that are conducive can enable the public to continue to trust the performance of the School Administration as public servants, especially Digital Audit. Because the Synergy organization can make the School Administration Audit the front guard of serving the Malpractice Removal in relation to innovations in security and order.

LITERATURE REVIEW

This Research is designed based on literature and reference from books; it allows researchers to define characters how hypothesis is concluded by applying the concept of research with strategy design from arranging Design of Digital Audit for transparency towards good companion problem solving to reduce corruption at a School.

Graphic 1. The Concept of Research

METHODOLOGY

In this chapter, the discussion depends on the reliability and cohesion of the explanation. Therefore, there is one basic question reflected from the previous paragraph: How could the Digital Audit preserve transparency for School Administration?

The objective of this research is to understand how the Digital Audit could preserve transparency for School Administration within the scope of the literature. The research aims to present and support how the filter method is applied in companies as managers train staff. The research applies Research and Development methods to explore how the Digital Audit could preserve transparency for School Administration.

Meanwhile, the design is measured at the end of the domain to assess how the Poster Test could impact mental transparency in relation to the Digital Audit and its role in preserving transparency for School Administration. In a common approach to training companies based on context, managers sometimes allow a suitable system to apply well-prepared methods, provided that School Administration staff are likely to ensure transparency for finance and programs within the School Administration.

RESULT AND DISCUSSION

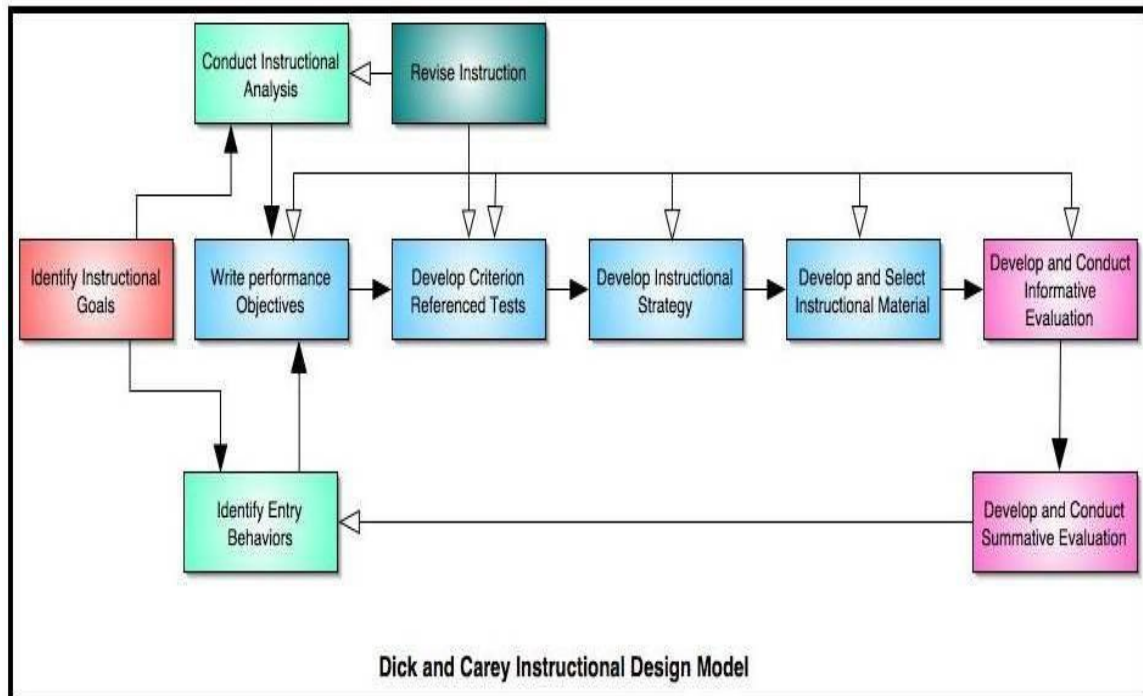

In this case, the law abuse is divided into two, namely the clear Law Abuse which includes the phrase against the law, while the other one does not include the phrase against the law. An example of a Special law abuse is article 372 of the Criminal Code which as meant prohibits the corruption and embezzlement in any forms This means that the civil or criminal articles link personal legal issues about any forms of the crimes.

This strategy must be able to stimulate and develop a spirit of trust in the Removal of Administration Malpractice so that trust in the School

Administration can be maximized, in this case the synergy between the Malpractice and the Administration in relation to creating security and order.

This synergy is actually driven directly by the Malpractice, supported by the Greater School Administration and the region in this effort to create a Preventive climate of security and order so that the Malpractice can experience optimal security and order. As if the service climate is conducive, the public will feel the stability of security and good order in the jurisdiction of the Greater School Administration Design.

Efforts to create a healthy climate of synergy between the Malpractice Administrative Removal and the Digital Audit at School that are conducive can enable the public to continue to trust the performance of the School Administration as public servants, especially Digital Audit. Because the Synergy organization can make the School Administration Audit the front guard of serving the Malpractice Removal in relation to innovations in security and order.

Graphic 2. The Theoretical Recycle Model of Digital Administration Report at School (Dick & Carey, 2001)

The Device Could Refer to The Theory Model of Dick and Carry with Result Cycle as explained the optimization model is as follows:

1. Act out the need for a decision. This step requires recognition of the need for the decision being made. The problem that is the difference between the desired state and the actual state requires recognition when The Digital Application is set up, the decision for the suspect must be sentenced after implemented the strategy from the model.
2. Determine the criteria or objectives as the model stated of being installed and the password must be absolutely secret and recorded in hidden data

as difficult to hack to be decided. In this step, important and relevant criteria must be identified in the decision-making process.

3. Determine weighted criteria. The criteria that have been prepared do not all have the same importance and their weights must be assigned so that decision makers can use their preferences to express the relative degree of importance given to each of them as the next criteria can refer from previous criteria, the password is confidential and the device could perform from trusted source as the model describes as a device is installed for the system from Educational Centre Institution to fix the cost of program therefore the cost is not able to pass the value of the cost but it may be less for example the Lunch cost is just Rp. 50.000 from Government per attendance or source but the administrator insert Rp. 100.000 per consumption meal and the system rejects.

CONCLUSION AND SUGGESTION

Administrative activities are needed as standard administrative work standards for the National Police as state administrative efforts to do things effectively and easily, according to William H Newman in his book *Administrative Action* states that Administration has been defined as the guidance, and leadership and control of the effort of a group of individuals towards some common goals.

Therefore, good health starts from the lowest bureaucracy of the Indonesian School Institution by providing counseling or symposiums to subordinate members or officials with this theory so that the image of the Institution can change to what it was before as healthy school without report manipulation for any programs.

It is interpreted that administratively, the common school officials, the Security and Order Section, is tasked with being an administrative liaison between the parents and school administration towards health administration ahead during practical reason as finance outcome should be more relevant as the programs audited digitally is more comprehensive and believed than therefore recorded manually.

ADVANCED RESEARCH

In this case, the law abuse is divided into two, namely the clear Law Abuse which includes the phrase against the law, while the other one does not include the phrase against the law. An example of a Special law abuse is article 372 of the Criminal Code which reads for emblems or corruptions are prohibited and sentenced before the law. This means that the civil or criminal articles link personal legal issues to the interests of Detail Form of Digital Audit of School Management could provide and explain in detail.

ACKNOWLEDGEMENT

This presents gratitude for all parties as supporting data and findings as the research is finally conducted for summation as follow:

1. Mr Ir.Bachtiar Prabowo MM as Rector of University of Yos Soedarso Surabaya.
2. Mr Ruslin, S.H.,M.H as Dean of Faculty of Law University of Yos Soedarso.
3. The research is grateful for the Herlina Simangunsong Faculty of Education with Mathematics Department as The Data Collector and plan the School Problematic Design of Inner Corruption with Manipulation of Finance and Program Report and Dahlia Nopelina Siallagan Economics Faculty and Management Department who supported Digital Audit for Automatic filter with effective and strong function to reduce corruption at School from University of Sisingamangaraja XII Tapanuli both of them are the fund riser for the research.
4. All my participants are unwritten in this research article.
